AIS – AURELIA INDUSTRIAL SYSTEMS

COMPANY OVERVIEW

Aurelia Industrial Systems (AIS)
Company Overview
(123) 456-7890

Document ID: AIS-CORP-001
Version: 1.2
Effective Date: September 30, 2026
Category: Company Documentation
Language: English
Classification: Internal / Customer Reference

---

1. Company Profile

Aurelia Industrial Systems (AIS) is an Italian industrial automation company headquartered in Milan, Italy.

Founded in 2012 by a team of industrial automation engineers, AIS designs, manufactures, installs, and supports automated production systems for business customers across Europe.

The company's primary customers operate in manufacturing sectors where production reliability, automation, traceability, and technical support are critical to their operations.

AIS combines industrial machinery with engineering services, technical support, preventive maintenance, spare-parts logistics, remote diagnostics, and production-system integration.

AIS products are designed for professional industrial environments and must be operated and maintained according to the applicable product documentation and safety procedures.

---

2. Company History

AIS was established in Milan in 2012 with the objective of developing compact automated assembly systems for European manufacturers.

During its first years of operation, the company focused primarily on compact assembly cells and customized automation projects.

In 2016, AIS introduced the AIS-200 Industrial Assembly System, designed for customers requiring higher production capacity and more advanced automation capabilities.

In 2020, the company expanded its product portfolio with the AIS-500 High Performance Production System, designed for high-throughput industrial production environments.

Since 2023, AIS has expanded its remote diagnostics and technical-support capabilities, allowing authorized support engineers to analyze selected machine conditions without requiring an immediate on-site intervention.

---

3. Headquarters and Operations

Headquarters

Aurelia Industrial Systems S.p.A.

Via delle Industrie 42
20158 Milan
Italy

The Milan headquarters hosts:

- Executive Management
- Engineering
- Product Development
- Customer Support
- Technical Support
- IT & Security
- Finance
- Administrative functions

AIS also works with regional field-service partners and authorized technical personnel throughout Europe.

---

4. Business Areas

AIS operates across several industrial automation business areas.

Industrial Automation

AIS designs automated machinery for assembly and production processes.

Engineering

Engineering teams support:

- Machine configuration
- Production-line integration
- Automation customization
- Industrial communication
- MES integration
- Complex technical investigations

Technical Support

Technical Support assists customers with:

- Machine alarms
- Error codes
- Configuration questions
- Troubleshooting
- Remote diagnostics
- Maintenance-related issues

Preventive Maintenance

AIS provides preventive-maintenance services intended to reduce unplanned downtime and maintain machines within their documented operating conditions.

Spare Parts

AIS supplies original spare parts and replacement components for supported machinery.

Warranty Services

AIS manages warranty requests and determines whether a reported issue is covered according to the applicable warranty terms and customer contract.

---

5. Product Portfolio

AIS currently maintains three primary industrial automation systems.

AIS-100 — Compact Assembly System

The AIS-100 is designed for compact automated assembly applications.

Standard capacity: 40 units per minute.

The system is suitable for customers requiring a relatively compact automation solution while maintaining automated production and integrated safety controls.

Standard preventive maintenance is required every **1,500 operating hours**.

Typical applications include:

- Component assembly
- Small-part production
- Semi-flexible manufacturing cells
- Compact production environments

AIS-200 — Industrial Assembly System

The AIS-200 is an industrial assembly system designed for customers requiring higher production capacity and more advanced automation capabilities.

Standard capacity: 80 units per minute.

The AIS-200 includes:

- Robotic automation
- Advanced HMI
- Remote diagnostic capabilities
- Redundant safety systems
- Industrial communication interfaces

The current approved preventive-maintenance interval for the AIS-200 is **2,000 operating hours**.

Customers should always use the latest effective maintenance documentation when determining the applicable maintenance interval.

AIS-500 — High Performance Production System

The AIS-500 is AIS's high-performance production system.

Standard capacity: 180 units per minute.

The AIS-500 is designed for high-throughput manufacturing environments and can include:

- Multiple robotic modules
- Industrial PLC control
- Advanced diagnostics
- Industrial Ethernet communication
- OPC UA communication
- MES integration

The standard preventive-maintenance interval is **2,500 operating hours**.

---

6. Product Comparison

Product	Primary Application	Capacity	Maintenance Interval
AIS-100	Compact assembly	40 units/min	1,500 hours
AIS-200	Industrial assembly	80 units/min	2,000 hours
AIS-500	High-performance production	180 units/min	2,500 hours

The values above represent standard configurations. Customer-specific configurations may differ from the standard product configuration.

---

7. Customer Services

AIS provides several services throughout the customer lifecycle.

Installation and Commissioning

AIS technicians or authorized partners can install and commission machines at the customer's production facility.

Commissioning includes verification of:

- Machine configuration
- Electrical connections
- Safety systems
- Machine initialization
- Communication interfaces
- Initial production operation

Technical Support

Customers can contact AIS Technical Support for assistance with machine operation, alarms, diagnostics, and technical problems.

Preventive Maintenance

AIS offers scheduled maintenance services based on machine operating hours and applicable maintenance documentation.

Corrective Maintenance

Corrective maintenance may be required when a machine develops a fault that cannot be resolved through the standard operator troubleshooting procedure.

Spare Parts

AIS provides spare parts for supported equipment. Availability and delivery times depend on the component and customer location.

---

8. Customer Support

AIS Customer Support acts as the primary point of contact for customer requests.

Support requests are classified according to priority:

- **P1 — Critical:** Production stopped or critical operational impact.
- **P2 — High:** Major degradation with significant production impact.
- **P3 — Normal:** Technical or operational issue without major production impact.

- **P4 — Information:** General information or documentation request.

Customers should provide the following information when opening a technical ticket:

1. Customer name.
2. Machine serial number.
3. Product model.
4. Error code, if available.
5. Description of the problem.
6. Production impact.
7. Actions already performed.
8. Relevant maintenance information.

Providing complete information helps AIS reduce diagnostic time.

---

9. Standard Support Hours

Standard Customer and Technical Support hours are:

Monday–Friday
08:00–18:00 CET/CEST

Critical incidents may be handled outside standard support hours when the customer's service agreement includes emergency support coverage.

The applicable service agreement always takes precedence over standard support hours.

---

10. Support Channels

Customers may contact AIS through the approved customer-support channels.

Available channels may include:

- Customer Support portal
- Email support
- Telephone support
- Authorized service partners

Customers should use the emergency-support process for critical production-stopping incidents when such service is included in their contract.

---

11. Remote Diagnostics

AIS may use remote diagnostic capabilities for supported machines and authorized customers.

Remote diagnostics can be used to analyze information such as:

- Machine alarms
- Controller status
- Selected diagnostic parameters
- Communication status
- Error history

Remote diagnostic access is subject to authentication, authorization, customer agreement, and AIS security requirements.

AIS personnel must not access customer systems outside their authorized scope.

---

12. Warranty

AIS provides a standard **24-month warranty beginning on the machine installation date**, unless a customer contract specifies a different warranty period.

Warranty coverage may include manufacturing defects and covered component failures.

Warranty exclusions may include:

- Improper machine use
- Unauthorized modifications
- Unauthorized repairs
- Normal wear
- Consumables
- Operation outside documented specifications
- Inadequate maintenance

Final warranty determination is performed by authorized AIS personnel.

---

13. Information Security

AIS applies security controls to protect customer information and company systems.

Users must authenticate before accessing protected systems.

Access permissions are assigned according to the user's role and operational requirements.

The principle of least privilege applies to AIS systems.

Credentials, passwords, authentication tokens, and other secrets must never be disclosed through customer-support systems.

---

14. Data Privacy

AIS processes customer and personal data for legitimate business, contractual, operational, support, and security purposes.

Examples of information processed by AIS include:

- Customer organization information
- Contact information
- User accounts
- Machine information
- Orders
- Shipments
- Support tickets
- Technical diagnostic information

Access to customer information is restricted according to the user's authorization.

A customer user must not access information belonging to another customer organization.

---

15. Contact Information

Aurelia Industrial Systems S.p.A.
