AIS – AURELIA INDUSTRIAL SYSTEMS

WARRANTY POLICY

Aurelia Industrial Systems (AIS)
Warranty Policy
Document ID: AIS-POL-002
Version: 1.3
Effective Date: January 1, 2026
Category: Policy
Language: English
Classification: Internal / Customer Reference

---

1. Purpose

This policy defines the standard warranty conditions for products manufactured and supplied by Aurelia Industrial Systems.

The policy describes the standard warranty period, covered conditions, exclusions, and process for submitting warranty requests.

Customer contracts may contain warranty conditions that differ from this policy. In such cases, the applicable contract takes precedence.

---

2. Standard Warranty Period

The standard AIS warranty period is:

24 months from the machine installation date.

The installation date must be documented in the applicable customer or machine records.

If a customer contract specifies a different warranty period, the contractual warranty period applies.

---

3. Warranty Coverage

Subject to the applicable contract and warranty conditions, AIS warranty coverage may include:

- Manufacturing defects attributable to AIS.
- Defective covered machine components.
- Failures occurring during normal operation.
- Approved technical interventions required to correct a covered defect.
- Replacement components authorized by AIS as part of a warranty case.

Warranty coverage is determined based on the cause and circumstances of the failure.

---

4. Warranty Exclusions

The following conditions are generally excluded from standard warranty coverage:

Improper Use

Damage caused by operation outside documented machine specifications.

Unauthorized Modification

Damage resulting from modifications not approved by AIS.

Unauthorized Repairs

Damage resulting from repairs performed by unauthorized personnel.

Normal Wear

Components subject to normal wear are generally excluded.

Consumables

Consumable materials are generally excluded unless explicitly covered by the applicable contract.

Inadequate Maintenance

Failures caused by failure to perform required maintenance may be excluded.

Environmental Conditions

Damage caused by environmental conditions outside documented operating requirements may be excluded.

---

5. Customer Responsibilities

Customers are responsible for:

- Operating the machine according to the user manual.
- Performing required maintenance.
- Using approved operating procedures.
- Reporting abnormal conditions promptly.
- Maintaining relevant machine and maintenance records.
- Allowing authorized AIS personnel to perform required diagnostic activities.

Failure to comply with these responsibilities may affect warranty eligibility.

---

6. Warranty Request

A warranty request should contain:

1. Customer identifier.
2. Machine serial number.
3. Product model.
4. Installation date.
5. Description of the failure.
6. Error codes, if available.
7. Machine operating hours.
8. Maintenance history.
9. Diagnostic information.
10. Photographs or logs when requested.

Providing complete information can reduce the time required to evaluate the request.

---

7. Warranty Evaluation

AIS evaluates warranty requests based on available evidence.

The evaluation may consider:

- Machine age.
- Installation date.
- Operating hours.
- Maintenance history.
- Machine configuration.
- Error history.
- Failure mechanism.
- Previous repairs.
- Modifications.
- Environmental conditions.
- Applicable customer contract.

Being within the 24-month warranty period does **not automatically mean that every failure is covered**.

---

8. Technical Intervention

AIS may authorize a technical intervention after reviewing a warranty request.

Authorization of an intervention does not necessarily constitute a final warranty determination.

For example, AIS may authorize a technician to inspect a machine and subsequently determine that the failure resulted from an excluded condition.

The final warranty determination must be made by authorized AIS personnel.

---

9. Warranty and Maintenance

Required preventive maintenance remains the customer's responsibility unless the applicable service contract states otherwise.

Failure to perform required maintenance may affect warranty coverage if the failure is related to the missing maintenance.

Maintenance records should therefore be retained and made available when required for warranty evaluation.

10. Unauthorized Modifications

Examples of unauthorized modifications include:

- Changes to machine control logic without AIS approval.
- Installation of non-approved components.
- Modification of safety circuits.
- Changes to documented operating parameters.
- Unauthorized mechanical modifications.

Such modifications may invalidate warranty coverage for affected components or related failures.

---

11. Warranty Escalation

A warranty request should be escalated when:

- The cause of failure is unclear.
- Engineering analysis is required.
- The customer disputes the initial determination.
- Contractual interpretation is required.
- A significant production impact exists.

The AI support assistant may explain the warranty policy but must not independently approve or reject a warranty claim.

---

12. AI Assistant Restrictions

The AI assistant may:

- Explain warranty rules.
- Retrieve relevant warranty documentation.
- Collect information needed for a warranty request.
- Retrieve authorized machine and maintenance information.

The AI assistant must not:

- Approve a warranty claim.
- Reject a warranty claim as a final decision.
- Authorize an expensive intervention without the required approval.
- Interpret a customer contract as a legally binding decision.
- Expose another customer's warranty information.

---

13. Document Control

Version	Effective Date	Description
1.0	2024-01-01	Initial warranty policy
1.1	2025-01-15	Updated exclusions
1.3	2026-01-01	Updated evaluation and AI assistant rules

Current approved version: 1.3
